APPENDIX L
Notice Of Commencement

Town of East Gwillimbury

TOWN OF EAST GWILLIMBURY
CLASS ENVIRONMENTAL ASSESSMENT
STORMWATER MANAGEMENT MASTER PLAN
NOTICE OF STUDY COMMENCEMENT

Further to the objectives identified in the Lake Simcoe Protection Plan (June 2009), the Town of East Gwillimbury has retained a consultant to develop a Stormwater Management Master Plan to define all anticipated works necessary to maintain, expand and improve the existing storm drainage system (including ponds) while protecting the valued natural resources both within and beyond Town limits. This Class Environmental Assessment (EA) Master Plan is intended to improve the management of stormwater for both existing and planned development which is based on changes in land use as outlined in the Consolidated Official Plan 2031 for the Town of East Gwillimbury (June 2010). Cole Engineering Group Ltd. will be working closely with the Town of East Gwillimbury and the Lake Simcoe Region Conservation Authority to establish recommendations to address these improvements.

A key component of the study will be consultation with interested stakeholders (public, landowners and regulatory agencies). Public consultation will involve one (1) Public Information Centre (PIC) and a Public Education Campaign. These sessions will be designed to obtain input from the public to assist informing the decision making process and will provide updates as the study progresses.

The first PIC is anticipated to be held in February 2011. The purpose of this meeting will be to provide interested parties with an opportunity to review and discuss issues related to the study and the alternative design solutions. Details regarding the future consultation events will be advertised as the study progresses. In addition, information on the study will be posted on the Town of East Gwillimbury's website and can be found under the 'Our Town News' section at http://www.eastgwillimbury.ca.

The study is currently planned as a 'Master Plan' project in compliance with the Municipal Engineers Association document *"Municipal Class Environmental Assessment,"* (October 2000, amended 2007).

We are interested in hearing any comments or input that you may have about this study. Comments and information regarding the study are being collected to assist the Town of East Gwillimbury in meeting the requirements of the Environmental Assessment Act. This material will be maintained on file for use during the study and may be included in study documentation.

If you require further information, would like to be added to the mailing list, or if you have specific comments related to this study, please email your comments to EastGwillimburySWMMasterPlan@coleengineering.ca or contact either of the following:

This Notice was first issued on December 20, 2010.

APPENDIX M
Notice Of Public Information Centre

Town of East Gwillimbury

TOWN OF EAST GWILLIMBURY
CLASS ENVIRONMENTAL ASSESSMENT
STORMWATER MANAGEMENT MASTER PLAN
NOTICE OF PUBLIC INFORMATION CENTRE

The Town of East Gwillimbury has initiated a Class Environmental Assessment (Class EA) Master Plan to define all anticipated works necessary to maintain, expand and improve the existing storm drainage system (including ponds) while protecting the valued natural resources both within and beyond Town limits. The objective of the study is to improve the management of stormwater for both existing and planned development which is based on changes in land use as outlined in the Consolidated Official Plan 2031 for the Town of East Gwillimbury (June 2010) while meeting all requirements as set out in the Lake Simcoe Protection Plan (June 2009).

A key component of the study will be consultation with interested stakeholders (public, landowners and regulatory agencies). The Public Information Centre (PIC) will provide interested parties with an opportunity to review the work completed to date, discuss issues related to the project, and review potential alternative solutions. A PIC is scheduled for:

Date: Thursday, March 3, 2011
Location: Town of East Gwillimbury Town Office
Holland Landing Room
19000 Leslie St.
Sharon, ON L0G 1V0
Time: 4:00 p.m. to 7:00 p.m.

The study will be conducted as a 'Master Plan' project in compliance with the Municipal Engineers Association document *"Municipal Class Environmental Assessment,"* (October 2000, amended 2007) which will address Phases 1 and 2 of the Class EA Process. We are interested in hearing any comments or input that you may have about this study. Comments and information regarding the study are being collected to assist the Town of East Gwillimbury in meeting the requirements of the Environmental Assessment Act. This material will be maintained on file for use during the study and may be included in study documentation.

If you require further information, or if you have specific comments related to this study, please contact either of the following:

COLE ENGINEERING

Town of East Gwillimbury

Purpose of the Public Information Centre

The purpose of this Public Information Centre (PIC) is to introduce you to this project, inform you of progress to date and obtain your comments.

The major elements presented today are:

- Study Overview & Background;
- Problem / Opportunity Statement
- Overview of the Municipal Class Environmental Assessment Process;
- Alternative Solutions Being Considered; and
- Next Steps.

COLE ENGINEERING

Town of East Gwillimbury

Study Overview

Problem

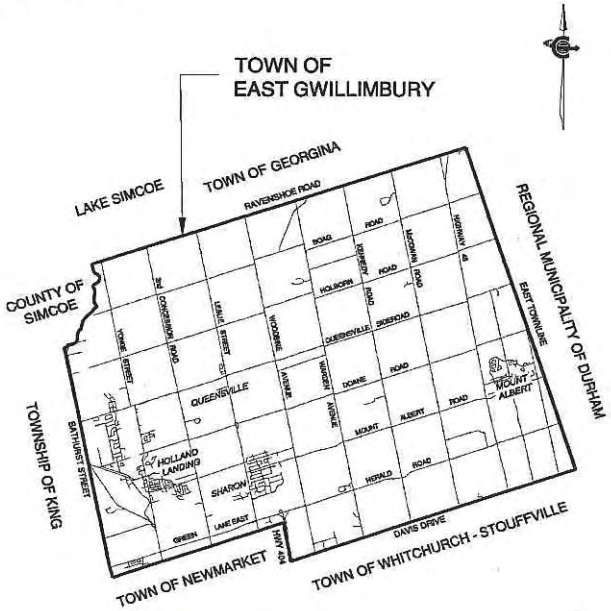
The Town of East Gwillimbury has retained Cole Engineering to develop a Stormwater Management Master plan in accordance to *Section 4.5-SA* of the *Lake Simcoe Protection Plan (June 2009).* The plan will define all anticipated works necessary to maintain, expand and improve the existing storm drainage system.

Opportunity

An opportunity exists to improve stormwater management within the Town of East Gwillimbury by implementing a drainage strategy. While implementing drainage improvements, there will be the opportunity to mitigate ongoing erosion and sedimentation, phosphorus loadings and changes in water balance.

This study is following the Master Plan requirements of the Municipal Class EA (2007) planning process.

Key Plan



COLE ENGINEERING

Town of East Gwillimbury
Our town, Our future

Background

- A Stormwater Management (SWM) Master Plan is to define all anticipated works necessary to maintain, expand and improve the existing storm drainage system (including ponds) while protecting the valued natural resources both within and beyond Town limits.

- The anticipated growth of the Town as outlined in the Town of East Gwillimbury Consolidated Official Plan 2031 (June 2010), provides the framework necessary for the development of the SWM Master Plan.

- The study area is part of four (4) subwatersheds:
  1. West Holland River Subwatershed;
  2. East Holland River Subwatershed;
  3. Maskinonge River Subwatershed; and
  4. Black River Subwatershed.

- High phosphorus levels in Lake Simcoe is a current issue, thus efforts will be made to mitigate phosphorus loadings generated from existing and planned development.

COLE ENGINEERING

Town of East Gwillimbury

Overview of the Municipal Class Environmental Assessment Process

- The *Municipal Class Environmental Assessment (2007)* (Class EA) process, which is approved under the *Environmental Assessment Act*, enables the planning of municipal infrastructure projects in accordance with a proven procedure for protecting the environment.

- The study is being undertaken in accordance with the first two Phases of the Class EA process for a **Master Plan** project.

- The Master Plan Class EA process includes public and review agency consultation, an evaluation of alternatives, and an assessment of the effects on the environment.

- There is an opportunity at any time during the Class EA process for public input, including this Public Information Centre (PIC).

- Upon completion of the Master Plan Class EA, a Project File Report will be available for public review.

Our town, Our future

Alternative Stormwater Management Strategies

1. Do Nothing

- Existing stormwater management works are left in place for rural and urban lands.
- The Town continues to grow and expected flooding and erosion issues may arise.

2. Traditional Stormwater Management Strategy

- This alternative is the implementation of conventional stormwater management in proposed development or redevelopment areas.
- Stormwater management works would consist of stormwater management ponds for quality, quantity and erosion control as per the Ministry of Environment (MOE) guidelines.

3. Traditional SWM with BMP Implementation Strategy

- This alternative is consistent with the Traditional Stormwater Management Strategy as it will apply to proposed development and redevelopment areas.
- Best Management Practices of source controls, conveyance controls and end of pipe measures will be implemented for all proposed areas of development.
- Alternative LIDs (Low Impact Development technologies) would also be considered where applicable.

4. Traditional SWM with Urban Retrofits Strategy

- This alternative is consistent with the Traditional Stormwater Management Strategy as it will apply to proposed development and redevelopment areas.
- In addition, a variety of source, conveyance and end of pipe retrofit measures will be implemented in existing urban areas.

5. Traditional Stormwater Management with Rural Retrofits Strategy

- This alternative is consistent with the Traditional Stormwater Management Strategy as it will apply to proposed development and redevelopment areas.
- In addition, a variety of source, conveyance, and end of pipe measures will be implemented in exisiting rural areas.

COLE ENGINEERING

Town of East Gwillimbury

Alternative Solutions: Source Controls

Roof Downspout Disconnection

- Involves directing flow from roof downspouts to a pervious area that drains away from the building.
- Will prevent stormwater from directly entering the storm sewer system or flowing across an impervious surface, such as a driveway that drains into a storm sewer.

Bioretention

- Bioretention are landscaping features that temporarily stores, treats, and infiltrates runoff.
- Primary component is a filter bed composed of a mixture of sand and organic material. Other components include mulch ground cover and plants adapted to the conditions of stormwater practice.
- Designed to capture small storm events.

Green Roofs (i.e. Roof Gardens)

- Consist of a thin layer of vegetation and growing medium on top of a conventional flat or sloped roof.
- Improve energy efficiency, water quality, water balance, and peak flow control.
- Excess rainfall enters underdrain and overflow points and is conveyed in the building drainage system.
- Stored water is evapotranspirated by the plants and evaporates or slowly drains.

COLE ENGINEERING

Town of East Gwillimbury

Alternative Solutions: Source Controls

Soakaway Pits, Infiltration Trenches

- Soakaway pits and infiltration trenches are rectangular or circular excavations with geotextile fabric, filled with clean granular stone.
- They will receive runoff from a perforated pipe inlet and allow it to infiltrate into the native soil.
- Typically service individual lots and receive only roof and walkway runoff.

Permeable Pavement

- Allows stormwater to drain through the pavement and into a stone reservoir where is infiltrates into underlying native soil or temporarily detained.
- Can be used for low traffic roads, parking lots, driveways, pedestrian walkways. Ideal for sites with limited space for surface stormwater BMPs.

Rainwater Harvesting

- The process of intercepting, conveying and storing rainfall for future use.
- Potable water can be used in rural and urban areas to irrigate landscaped areas and for other uses.
- Rainwater is typically collected from roof drains into rain barrels or containment units.

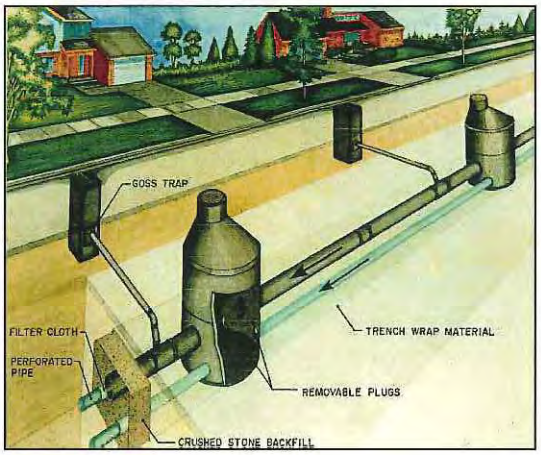
COLE ENGINEERING

Town of East Gwillimbury

Alternative Solutions: Conveyance Controls

Grassed Swales

- Vegetated open channels designed to convey, treat and attenuate stormwater runoff.
- Check dams and vegetation in the swale slows the water to allow sedimentation, filtration through the root zone, evapotranspiration, and infiltration into the underlying native soil.



Perforated Pipe Systems

- Long infiltration trenches or linear soakaway pits that are designed for both conveyance and infiltration of stormwater runoff.
- Composed of perforated pipes lined with geotextiles to allow infiltration.
- Perforated pipe systems can be used in place of conventional storm sewer pipes where topography, and water table depth conditions are suitable.

Vegetated Filter Strips

- Gently sloped, densely vegetated areas that treat runoff as sheet flow from adjacent impervious areas.
- Function by slowing runoff velocity and filtering out suspended sediment and pollutants, while providing some infiltration.
- Vegetation may be compromised of a variety of trees, shrubs and native plants.

Town of East Gwillimbury
Our town, Our future

Alternative Solutions: End of Pipe Measures

Stormwater Management Ponds (Wet Ponds)

- Less land intensive than wetland systems and normally reliable in operation.
- Can efficiently provide for water quality, erosion, and quantity control.
- Can be designed with extensive landscaping and associated recreational amenities.

Dry Ponds

- Dry ponds have no permanent pool of water and rely on retention time for contaminant removal.
- Designed for erosion control, flood control and the removal of stormwater contaminants.

Constructed Wetlands

- Suitable for providing storage needed for erosion control and phosphorus removal but limited in flood control.
- Normally more land intensive than wet ponds due to shallow depth.

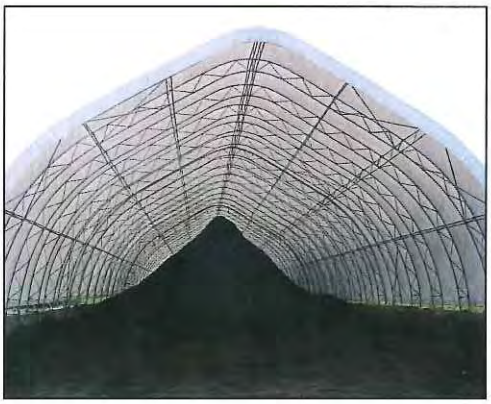
COLE ENGINEERING

Town of East Gwillimbury

Alternative Solutions: Rural Measures

Restoration Measures

- Includes the restoration or enhancement of existing habitats.
- Stream restoration programs help develop the implementation of this alternative.
- Aquatic and terrestrial habitat enhancement.



Structural Measures

- Designed to reduce the loss of topsoil containing contaminants and their deposition into the lake and watershed.
- Examples include proper manure storage, milkhouse waste management, private septic systems, bypass channels and bottom draw structures for online ponds.

Non-Structural Measures

- Best Management Practices in rural areas which do not require structures.
- Examples include livestock fencing, buffer strips, conservation tillage and nutrient management.

COLE ENGINEERING

Town of East Gwillimbury

The Next Steps . . .

- Comments received from this PIC will be considered along with those received from review agencies and landowners in order to identify the preferred Alternative Solution(s).

- The study team will identify alternative design concepts associated with the preferred solution and evaluate those concepts while considering the anticipated environmental effects.

- A Notice of Completion will be mailed to the contact list, advertised, and the project file will be available for viewing at the Town Hall.

- Further comments can be provided after the PIC or when the Notice of Completion is published.

Thank you for your participation!

Markham, Ontario L3R 4T5

Dear Mr. Graham,

Re: Town of East Gwillimbury, Class Environmental Assessment Storm water Management Master Plan - Notice of Public Information Centre

I am writing in response to your letter of February 22, 2011 addressed to Josée Beauregard inquiring about any claims that may affect the subject property. I regret that we were unable to respond earlier. Thank you for your invitation to the Public Information Centre, held on March 3, 2011. Unfortunately, we were unable to attend; however, the following information regarding active litigation may be useful to you as it could affect the lands that you are concerned with.

We can inform you that our inventory includes active litigation in the vicinity of this property. They are, *Alderville Indian Band, Beausoleil Indian Band, Chippewas of Georgina Island Indian Band, Chippewas of Rama Indian Band, Curve Lake Indian Band, Hiawatha Indian Band, Mississaugas of Scugog Indian Band v. HTMQ and Ontario (Third Party), Federal Court of Canada, filed in Montreal, Court file reference # T-195-92;* and

Moose Deer Point First Nation, Chief Edward Williams suing on his own behalf and on behalf of the members of Moose Deer Point First Nation v. Her Majesty the Queen in Right of Ontario, Superior Court of Justice File #01-CV-220612CM.

I am unable to comment with respect to the possible effect of these claims as the cases have not yet been adjudicated and any statement regarding the outcome of the litigation would be speculative at this point. It is recommended that you consult legal counsel as to the effect these actions could have on the lands you are concerned with.

If you are interested in further details about these claims, copies of the pleadings can be obtained from the Court for a fee. Please contact the appropriate Court Registry Office and make reference to the court file numbers listed above.

We cannot make any comments regarding claims filed under other departmental policies. For information on any claims you should also contact Don Boswell of the Specific Claims Branch at (819) 953-1940 to inquire about any Specific Claims. To inquire about any current Comprehensive Claims, please contact Nicole Cheechoo of Treaty and Aboriginal Government Central Operations at (819) 997-3499.

If you have any further questions please do not hesitate to contact me at (819)994-1947. Also, please note that all future requests of this nature should no longer be addressed to Josée Beauregard. Instead, could you kindly modify your distribution list to send these requests to the following destination:

Marc-André Millaire, Ontario Team
Indian and Northern Affairs
LITIGATION MANAGEMENT AND RESOLUTION BRANCH
25 Eddy Street

Lake Simcoe Regional Conservation Authority Meeting Minutes

COLE ENGINEERING

Meeting Minutes

PROGRESS MEETING #:	LSRCA Meeting #1	DATE:	January 14th, 2011
		TIME:	10:00 AM
PROJECT NAME:	Town of East Gwillimbury Stormwater Management Master Plan	PROJECT #:	W10-487
LOCATION:	LSRCA Offices 120 Bayview Parkway, Newmarket		
PURPOSE:	Discuss East Gwillimbury SWM Master Plan		

PRESENT:
Tom Hogenbirk (TH), LSRCA
Geoff Masotti (GM), Cole Engineering
Alan Manlucu (AM), Cole Engineering

REGRETS:

ITEM	DESCRIPTION	ACTION BY
1.	**Review of Sections in the LSPP** • Reviewed each section of SWM Master Plan Guidelines Matrix with respect to the LSPP Document • Existing GIS Layers/Models/Data required from LSRCA • TH to provide GIS and Models by request with Agreement Form • Contact for information or clarifications regarding the SWM Master Plan is Tom Hogenbirk, LSRCA	
2.	**Specific Sections Required to be Addressed** Phosphorus • If > 750 ha, model required • Refer to Report on Phosphorus Loads to Lake Simcoe 2004-2007 for pre-development loading rates • Refer to Humber River Watershed phosphorus study regarding urban phosphorus loading rates Climate Change • Address based on SWM Facility improvements for changes in weather (i.e. droughts or floods) and if retrofit opportunities exist • Vegetation within SWM Facility to be improved based on climate change • Based on frequency of flooding, what are the impacts to existing SWM Facilities and infrastructure? What improvements need to be made? • Refer to Dave Lemkey (Dave L.?) from LSRCA for retrofit strategy (2007) Erosion Analysis • Erodibility Index Analysis of reaches within EG and analysis to meet Index • Possible survey requried with assistance from fluvial	

PLEASE NOTE: If your records of this meeting do not agree with this document, or if there are any omissions, please advise the writer at once, otherwise the contents of this document shall be assumed accurate and correct.

ITEM	DESCRIPTION	ACTION BY
3.	Alternatives • If proposing BMPs, may require by-law or implementation of permanent BMPs • Abide by LSPP as well as EA Process with respect to alternatives and public consultation	
4.	Review • Circulation to LSRCA, but ultimate approval by Town required • Final Project File to be organized by headings outlined in Section 4.5 of LSPP (SWM Master Plan Guidelilnes Matrix) with Alternatives based on EA Process	

Next Meeting: TBD
Minutes Recorded By: Alan Manlucu
Distribution: Town of East Gwillimbury

RE: TSS Comments:
Stormwater Management Master Plan
Town of East Gwillimbury
Class Environmental Assessment
Response to Notice of Commencement

Dear Mr. Kallimootoo:

This letter is our response to the Notice of Study Commencement for the above noted project. This response acknowledges that the Town of East Gwillimbury has indicated that its study is following the approved environmental planning process under the *Municipal Engineers Association Municipal Class Environmental Assessment* (Class EA).

Based on the information submitted, we have identified the following issues of concern with respect to the proposed undertaking:

- Ecosystem Protection and Restoration
- Surface Water
- Groundwater
- Air Quality
- Servicing and Facilities
- Contaminated Soils
- Mitigation and Monitoring
- Planning and Policy
- Class EA Process
- First Nations Consultation

We are providing the following general comments to assist you and your project team members in effectively addressing these issues:

Ecosystem Protection and Restoration

- Any impacts to ecosystem form and function must be avoided where possible. The Project File/ESR should describe any proposed mitigation measures and how project planning will protect and enhance the local ecosystem.

- All natural heritage features should be identified and described in detail to assess potential impacts and to develop appropriate mitigation measures. Our records confirm that the following sensitive environmental features are located within or adjacent to the Study Area:

  - Areas of Natural and Scientific Interest (ANSIs)
  - Environmentally Sensitive Areas (ESAs)

- Rare Species of flora or fauna
- Watercourses
- Wetlands
- Woodlots

We recommend consulting with the Ministry of Natural Resources (MNR), Fisheries and Oceans Canada (DFO) and your local conservation authority to determine if special measures or additional study will be necessary to preserve and protect these sensitive features.

Surface Water

- The Project File/ESR must include a sufficient level of information to demonstrate that there will be no negative impacts on the natural features or ecological functions of any watercourses within the Study Area. Measures should be included in the planning and design process to ensure that any impacts to watercourses from construction or operational activities (e.g. spills, erosion, pollution) are mitigated as part of the proposed undertaking. The MOE Guideline B-6, *Evaluating Construction Activities Impacting on Water Resources* should be used to plan and construct this project.

- Additional stormwater runoff from new pavement can impact receiving watercourses and flood conditions. Quality and quantity control measures to treat stormwater runoff should be considered for all new impervious areas and, where possible, existing surfaces. MOE's *Stormwater Management Planning and Design Manual* (2003) should be referenced in the Project File/ESR and utilized when designing stormwater control methods. We recommend that a Stormwater Management Plan should be prepared as part of the Class EA process that includes:

    - Strategies to address potential water quantity and erosion impacts related to stormwater draining into streams or other sensitive environmental features, and to ensure that adequate (enhanced) water quality is maintained
    - Watershed information, drainage conditions, and other relevant background information
    - Future drainage conditions, stormwater management options, information on erosion and sediment control during construction, and other details of the proposed works
    - Information on maintenance and monitoring commitments

- Ontario Regulation 60/08 under the Ontario Water Resources Act (OWRA) applies to the Lake Simcoe Basin, which encompasses Lake Simcoe and the lands from which surface water drains into Lake Simcoe. The proposed WWTP is listed in Table 1 of the regulation. The EA Document should describe how the proposed project and its mitigation measures are consistent with the requirements of this regulation and the OWRA.

Groundwater

- The status of, and potential impacts to any well water supplies should be addressed. If the project involves groundwater takings or changes to drainage patterns, the quantity and quality of groundwater may be affected due to drawdown effects or the redirection of existing contamination flows. In addition, project activities may infringe on existing wells such that they must be reconstructed or sealed and abandoned. Appropriate information to define existing groundwater conditions should be included in the Project File/ESR.

- If the potential construction or decommissioning of water wells is identified as an issue, the Project File/ESR should refer to Ontario Regulation 903, Wells, under the *Ontario Water Resources Act*.

- Potential impacts to groundwater-dependent natural features should be addressed. Any changes to groundwater flow or quality from groundwater taking may interfere with the ecological

processes of streams, wetlands or other surficial features. In addition, discharging contaminated or high volumes of groundwater to these features may have direct impacts on their function. Any potential effects should be identified, and appropriate mitigation measures should be recommended. The level of detail required will be dependent on the significance of the potential impacts.

- Any potential approval requirements for groundwater taking or discharge should be identified in the Project File/ESR. In particular, a Permit to Take Water (PTTW) under the *Ontario Water Resources Act* will be required for any water takings that exceed 50,000 litres per day. A PTTW application must be accompanied by an assessment of potential effects as noted above, and may require a higher level of detail than what is provided in the Project File/ESR. Please note that when significant long-term water taking is proposed, the maximum rate identified in the Project File/ESR must not be exceeded in any subsequent PTTW applications. For more information on the application and approval process, we suggest you refer to the MOE *Permit to Take Water Manual* (April 2005).

Air Quality

- An air quality or odour impact assessment may be required for this project to evaluate alternatives, determine impacts and identify appropriate mitigation measures. The scope of the assessment should be determined based on the potential effects of the proposed alternatives, and typically includes source and receptor characterization, a quantification of air quality impacts by determining emission rates and conducting dispersion modelling, and an assessment of effects. This assessment should compare to all available standards for any contaminants of concern. We recommend that you contact this office during the scoping process to confirm the appropriate level of assessment.

Dust and Noise

- Dust and noise control measures should be addressed and included in the construction plans to ensure that nearby residential and other sensitive land uses within the Study Area are not adversely affected during construction activities. If dust suppressants are proposed to be used, we recommend the use of non-chloride based compounds to protect water quality.

- The Project File/ESR should consider the potential impacts of increased noise levels during the operation of the undertaking. The proponent should explore all potential measures to mitigate significant noise impacts during the assessment of alternatives.

Servicing and Facilities

- Any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste must have a Certificate of Approval before it can operate lawfully. Please consult with the Environmental Assessment and Approvals Branch to determine whether a new or amended Certificate of Approval will be required for any proposed infrastructure.

- We recommend referring to MOE's "D-Series" guidelines – *Land Use Compatibility* to ensure that all applicable Ministry procedures are followed in planning for any infrastructure or facilities related to wastewater, pipelines, landfills or industrial uses.

Contaminated Soils

- Since the removal or movement of soils may be required, appropriate tests to determine contaminant levels from previous land uses or dumping should be undertaken. If the soils are

contaminated, you must determine how and where they are to be disposed of, consistent with *Part XV.1 of the Environmental Protection Act (EPA)* and Ontario Regulation 153/04, Records of Site Condition, which details the new requirements related to site assessment and clean up. We recommend contacting the MOE York Durham District Office in Ajax for further consultation if contaminated sites are present.

- The location of any underground storage tanks should be included in the Project File/ESR. Measures should be identified to ensure the integrity of these tanks and to ensure an appropriate response in the event of a spill. The MOE Spills Action Centre must be contacted in such an event.

- Any current or historical waste disposal sites should be identified in the Project File/ESR. The status of these sites should be determined to confirm whether approval pursuant to Section 46 of the *Environmental Protection Act* may be required for land uses on former disposal sites.

- The Project File/ESR should identify any underground transmission lines in the Study Area. The owners should be consulted to avoid impacts to this infrastructure, including potential spills.

Mitigation and Monitoring

- Design and construction reports and plans should be based on a best management approach that centres on the prevention of impacts, protection of the existing environment, and opportunities for rehabilitation and enhancement of any impacted areas.

- All waste generated during construction must be disposed of in accordance with MOE requirements.

- Contractors must be made aware of all environmental considerations so that all environmental standards and commitments for both construction and operation are met. Mitigation measures should be clearly referenced in the Project File/ESR and regularly monitored during the construction stage of the project. In addition, we encourage proponents to conduct post-construction monitoring to ensure all mitigation measures have been effective and are functioning properly. The proponent's construction and post-construction monitoring plans should be documented in the Project File/ESR.

Planning and Policy

- The *Lake Simcoe Protection Plan* (LSPP), *2009*, contains policies to protect, improve or restore the elements that contribute to the ecological health of the Lake Simcoe Watershed. Since part of the Study Area is within the Lake Simcoe Watershed, applicable policies should be referenced in the Project File/ESR for this proposed project, and the Town of East Gwillimbury should demonstrate how the project is consistent with these policies.

- The *Oak Ridges Moraine Conservation Plan, 2001,* contains policies that protect the Moraine's ecological and hydrological features and functions. Since the Study Area is within the Oak Ridges Moraine planning area, the proponent should consider and document how the project adheres to the relevant sections of the *Oak Ridges Moraine Conservation Plan*, including section 41, which contains policies for Transportation, infrastructure and utilities. A description of measures that prevent and minimize potential impacts should also be included. You may wish to consider consulting with the Ministry of Municipal Affairs & Housing in this matter.

- The *Greenbelt Plan* contains policies that protect the Greenbelt's agricultural land base and the ecological features and functions occurring on this landscape. Since the Study Area is within the Greenbelt planning area, the Project File/ESR should demonstrate how the project adheres

to the relevant sections of the *Greenbelt Plan*, including Section 4.2.1 - General Infrastructure Policies. A description of measures that prevent and minimize potential impacts should also be included. You may wish to consider consulting with the Ministry of Municipal Affairs & Housing in this matter.

- The 2005 *Provincial Policy Statement* contains policies that protect Ontario's Natural Heritage. Applicable policies should be referenced in the Project File/ESR, and the proponent should demonstrate how this proposed project is consistent with these policies. You may wish to consider consulting with the Ministry of Municipal Affairs & Housing in this matter.

- The *Places to Grow Plan* contains policies which guide decisions on a range of issues such as infrastructure planning and land-use planning to ensure that stronger and more prosperous communities are built in the Greater Golden Horseshoe. The Project File/ESR should demonstrate how this project adheres to the relevant policies of the *Places to Grow Plan*, including Section 3, which contain policies for Infrastructure to Support Growth.

Class EA Process

- There are several different approaches that can be used to conduct a Master Plan, examples of which are outlined in Appendix 4 of the Class EA. The Project File/ESR should clearly indicate the selected approach for conducting the plan, in particular by identifying whether the levels of assessment, consultation and documentation are sufficient to fulfill the requirements for Schedule B or C projects. Please note that any Schedule B or C projects identified in the plan would be subject to Part II Order Requests under the *Environmental Assessment Act*, although the plan itself would not be.

- The Project File/ESR should provide clear and complete documentation of the planning process in order to allow traceability of decision-making. It must also demonstrate how the consultation provisions of the Class EA have been fulfilled, including documentation of all public consultation efforts undertaken during the planning process. Additionally, it should identify all concerns that were raised and how they have been addressed throughout the planning process. The Class EA also directs proponents to include copies of comments submitted on the project by interested stakeholders, and the proponent's responses to these comments.

- The Class EA requires the consideration of the effects of each alternative on all aspects of the environment. The Project File/ESR should include a level of detail (e.g. hydrogeological investigations, terrestrial and aquatic assessments) such that all potential impacts can be identified and appropriate mitigation measures can be developed. Any supporting studies conducted during the Class EA process should be referenced and included as part of the Project File/ESR.

- Please include in the Project File/ESR a list of all subsequent permits or other approvals that may be required for the implementation of the preferred alternative, including Permits to Take Water, Certificates of Approval or other ministerial approvals, approval under the *Canadian Environmental Assessment Act* (CEAA), and conservation authority permits.

- Please note that MOE guidelines and other information related to the issues noted above are available at www.ene.gov.on.ca under the publications link. We encourage the proponent to review all the available guides and to reference any relevant information in the Project File/ESR.

First Nations Consultation

- Please note that as part of the required stakeholder and agency consultation, proponents are advised to contact the Ministry of Aboriginal Affairs and the Department of Indian and Northern

Affairs to determine potentially affected Aboriginal peoples in the project area. Please refer to the website http://www.ene.gov.on.ca/en/eaab/aboriginal-resources.php for a list of appropriate government contacts.

- Once identified, you are advised to provide notification directly to the Aboriginal peoples who may be affected by the project and provide them with an opportunity to participate in any planned public consultation sessions and comment on the project.

Thank you for the opportunity to comment on this project. Please ensure that Nisha Shirali, MOE Central Region **EA and Planning Coordinator**, is placed on the project mailing list. We recommend a draft copy of the Project File/ESR be circulated to this office prior to the filing of the final draft, allowing approximately 30-days review time for the ministry's technical reviewers to provide comments. Please also forward our office the Notice of Completion and Project File/ESR when completed. Should you or any members of your project team have any questions regarding the above, please contact me at (416) 326-3577.

Yours sincerely,

Nisha Shirali
Environmental Resource Planner and EA Coordinator
Air, Pesticides and Environmental Planning

APPENDIX S
Statement Of Limiting Conditions And Assumptions

Statement of Limiting Conditions and Assumptions

1. This Report/Study (the "Work") has been prepared at the request of, and for the exclusive use of, the Owner, and its affiliates (the "Intended Users"). No one other than the Intended Users has the right to use and rely on the Work without first obtaining the written authorization of Cole Engineering Group Ltd. (Cole Engineering) and its Owner.

2. Cole Engineering expressly excludes liability to any party except the Intended Users for any use of, and/or reliance upon, the Work.

3. Cole Engineering notes that the following assumptions were made in completing the Work:

   a) the land use description(s) supplied to us are correct;
   b) the surveys and data supplied to Cole Engineering by the Owner are accurate;
   c) market timing, approval delivery and secondary source information is within the control of Parties other than Cole Engineering; and
   d) there are no encroachments, leases, covenants, binding agreements, restrictions, pledges, charges, liens or special assessments outstanding, or encumbrances which would significantly affect the use or servicing.

   Investigations have not been carried out to verify these assumptions. Cole Engineering deems the sources of data and statistical information contained herein to be reliable, but we extend no guarantee of accuracy in these respects.

4. Cole Engineering accepts no responsibility for legal interpretations, questions of survey, opinion of title, hidden or inconspicuous conditions of the property, toxic wastes or contaminated materials, soil or sub-soil conditions, environmental, engineering or other factual and technical matters disclosed by the Owner, the Client, or any public agency, which by their nature, may change the outcome of the Work. Such factors, beyond the scope of this Work, could affect the findings, conclusions and opinions rendered in the Work. We have made disclosure of related potential problems that have come to our attention. Responsibility for diligence with respect to all matters of fact reported herein rests with the Intended Users.

5. Cole Engineering practices engineering in the general areas of infrastructure and transportation. It is not qualified to and is not providing legal or planning advice in this Work.

6. The legal description of the property and the area of the site were based upon surveys and data supplied to us by the Owner. The plans, photographs, and sketches contained in this report are included solely to aide in visualizing the location of the property, the configuration and boundaries of the site, and the relative position of the improvements on the said lands.

7. We have made investigations from secondary sources as documented in the Work, but we have not checked for compliance with by-laws, codes, agency and governmental regulations, etc., unless specifically noted in the Work.

8. Because conditions, including capacity, allocation, economic, social, and political factors change rapidly and, on occasion, without notice or warning, the findings of the Work expressed herein, are as of the date of the Work and cannot necessarily be relied upon as of any other date without subsequent advice from Cole Engineering.

9. The value of proposed improvements should be applied only with regard to the purpose and function of the Work, as outlined in the body of this Work. Any cost estimates set out in the Work are based on construction averages and subject to change.

10. Neither possession of the Work, nor a copy of it, carries the right of publication. All copyright in the Work is reserved to Cole Engineering. The Work shall not be disclosed, produced or reproduced, quoted from, or referred to, in whole or in part, or published in any manner, without the express written consent of Cole Engineering and the Owner.

11. The Work is only valid if it bears the professional engineer's seal and original signature of the author, and if considered in its entirety. Responsibility for unauthorized alteration to the Work is denied.
